

The Science and Art of Transplantation
Customizing Patient Care for Improved Outcomes

Post-Test

1. Factors influencing renal injury and long-term transplant outcomes may include:
 - A. Acute rejection that has not been fully reversed
 - B. Perfusion Injury
 - C. BK Nephritis
 - D. All of the above

2. The most commonly used immunosuppressive agent in liver transplantation is:
 - A. Cyclosporine
 - B. Tacrolimus
 - C. Corticosteroids
 - D. Sirolimus

3. Hepatitis C infection further increases the risk of new onset diabetes mellitus.
 - A. True
 - B. False

4. Which of the following is *not* an approach to preventing transplant complications?
 - A. Treat hepatitis C pre-transplantation
 - B. Steroid minimization/avoidance
 - C. Monitor glucose levels pre-transplantation
 - D. Change or eliminate calcineurin inhibitors

5. Steroid-related side effects are associated with:
 - A. Noncompliance
 - B. Acute rejection
 - C. Increased graft loss
 - D. All of the above

6. The leading cause of death *1 year* after cardiac transplantation is:
 - A. Malignancy
 - B. Infection
 - C. Rejection
 - D. Non-specific graft failure

7. A measurement of allograft vasculopathy that most reliably predicts angiographic disease, cardiac events, graft failure, and recipient death is:
 - A. Coronary Angiography
 - B. Intravascular Ultrasound
 - C. Epicardial Coronary Stenoses
 - D. Cardial biopsy

8. The most important risk factor for chronic renal dysfunction is:
- A. Pre-transplant diabetes
 - B. Advanced recipient age
 - C. Hepatitis C
 - D. CNI toxicity
9. One of the major causes of graft loss after renal transplantation is:
- A. Acute rejection
 - B. Noncompliance
 - C. Chronic Allograft Injury
 - D. Patient death
10. What are the contributing factors to late graft loss in renal transplant recipients?
- A. Infection
 - B. Malignancy
 - C. Cardiovascular events
 - D. All of the above
